¿Qué constituye un 'documento' y cómo funciona?

According to the *Oxford English Dictionary*, the etymological origin is the Latin ‘documentum’, meaning ‘lesson, proof, instance, specimen’. As a verb, it is ‘to prove or support (something) by documentary evidence’, and ‘to provide with documents’. The online version of the *OED* includes a draft addition, whereby a document (as a noun) is ‘a collection of data in digital form that is considered a single item and typically has a unique filename by which it can be stored, retrieved, or transmitted (as a file, a spreadsheet, or a graphic)’. The current use of the noun ‘document’ is defined as ‘*something* written, inscribed, *etc*., which furnishes evidence or information upon any subject, as a manuscript, title-deed, tomb-stone, coin, picture, etc.’ (emphasis added).

Both ‘something’ and that first ‘etc.’ leave ample room for discussion. A document doubts whether it functions as something unique, or as something reproducible. A passport is a document, but a flyer equally so. Moreover, there is a circular reasoning: to document is ‘to provide with documents’. Defining (the functioning of) a document most likely involves ideas of communication, information, evidence, inscriptions, and implies notions of objectivity and neutrality – but the document is neither reducible to one of them, nor is it equal to their sum. It is hard to pinpoint it, as it disperses into and is affected by other fields: it is intrinsically tied to the history of media and to important currents in literature, photography and art; it is linked to epistemic and power structures. However ubiquitous it is, as an often tangible thing in our environment, and as a concept, a document *deranges*.

the-documents.org continuously gathers documents and provides them with a short textual description, explanation, or digression, written by multiple authors. In *Paper Knowledge*, Lisa Gitelman paraphrases 'documentalist' Suzanne Briet, stating that 'an antelope running wild would not be a document, but an antelope taken into a zoo would be one, presumably because it would then be framed – or reframed – as an example, specimen, or instance'.
The gathered files are all documents – if they weren't before publication, they now are. That is what the-documents.org, irreversibly, *does*. It is a zoo turning an antelope into an 'antelope'.

As you made your way through the collection, the-documents.org tracked the entries you viewed. It documented your path through the website. As such, the time spent on the-documents.org turned into this – a new document.

This document was compiled by ____ on 16.10.2022 16:54, printed on ____ and contains 16 documents on 34 pages. (https://the-documents.org/log/16-10-2022-4806/)

the-documents.org is a project created and edited by De Cleene De Cleene; design & development by atelier Haegeman Temmerman.

the-documents.org has been online since 23.05.2021.

Notes

- De Cleene De Cleene is Michiel De Cleene and Arnout De Cleene. Together they form a research group that focusses on novel ways of approaching the everyday, by artistic means and from a cultural and critical perspective.

In the philosophy aisle of the largest used and remaindered book shop in the city — which is a regular stop on my lunchbreak walks to escape the dreariness of my office job — that particular day a set of books caught my eye. They were four copies of the same edition of a title I had never had any inclination to read. It was the near-uniformity of the four books that made them stand out. Upon closer inspection, there were two more copies of two other editions of the book on the shelf.

It was immediately apparent to me that only three minor moves were required to bring the six copies together on the shelf, and to arrange the four copies of the same edition so that the level of sun fading of their spines would make their lettering form a white to dark pink gradient. I could think of no shade of the letters that would tastefully match the very light blue of the rest of the spine, which had remained relatively uniform across the four copies.

After having moved the books, I took a photograph of them with the camera in my smartphone.

It occurred to me only afterwards that while handling the books I had not leafed through them.

Some days later, going through my photo folder, I came across the picture I had taken to document my somewhat neurotic but oddly satisfying action and noticed that the camera had been in square mode and that the photo was blurry. I have not yet gone back to take a better picture.

Notes

- David Depestel hesitates in trying to make something of himself; a character, a profession, a fixed mode of being, are for him concepts that already shadow forth the outlines of the skeleton, which is all that will be left of him in the end.

In his debut novel ‘De Metsiers’ Hugo Claus employs a multiple narrative perspective. In the copy I picked up in a thrift store, there’s a bookmarker between pages 44 and 45 where the perspective shifts from Ana to Jim Braddok. It’s pouring. The pink piece of paper lists 9 sessions at a driving school. There’s a total of 20 hours, taught alternately by Johan and Guy.

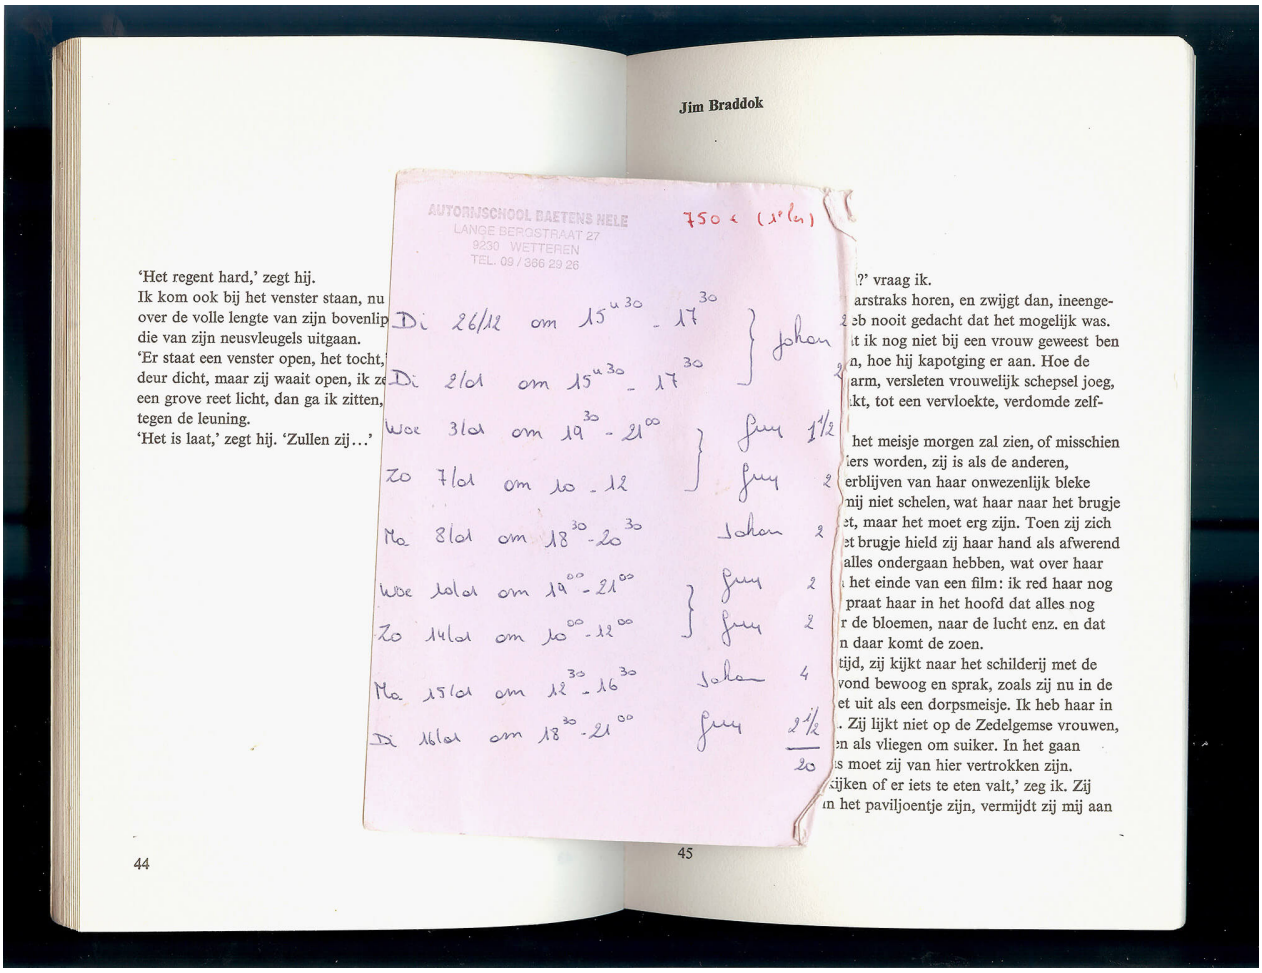

Notes

In 2000, 2006 and 2017 the twenty-sixth of December was a Tuesday. (Earlier years are improbable, since the Euro was not introduced yet.)

‘The masons in training pour a concrete slab and build four walls upon it in a stretcher bond. Then the block comes to our department and the students in the course *Electrical installer (residential)* can grind channels and drill cavities in it.’
[…]
‘It’s not always a success from the outset, but they learn quickly.’
[…]
‘Never grind horizontally, always vertically. Diagonally if there is no other way.’
[…]
‘Two fingers wide.’
[…]
‘After this it goes to the sanitary department. After the bell drilling, the demolition hammer follows and the masons make us a new block.’

Competentiecentrum VDAB, Wondelgem,
July 2019.

On March 23th 2015, a high pressure system above Panama Bay blew strong winds landwards. At the Gatun locks, one of the webcams overlooking the Canal neglected the traffic and briefly captured its own images. The ship’s presumed passage through the Gatun locks wasn’t recorded by this camera and the AIS-transponder did not save any data of the ship’s transit from the Pacific to the Atlantic side of the canal: the Authenticity managed to swap oceans undetected.

On February 16th 2016, the transponder still signals the ship near the port of Bahia Las Minas. The current is calm, the ship has been practically immobile for a year.

Ten years ago, in November, I drove up to Frisia – the northernmost province of The Netherlands. I was there to document the remains of air watchtowers: a network of 276 towers that were built in the fifties and sixties to warn the troops and population of possible aerial danger coming from the Soviet Union. It was very windy. The camera shook heavily. The poplars surrounding the concrete tower leaned heavily to one side.

I drove up to the seaside, a few kilometers farther. The wind was still strong when I reached the grassy dike that overlooked the kite-filled beach. I exposed the last piece of film left on the roll. Strong gusts of wind blew landwards.

Months later I didn’t bother to blow off the dust that had settled on the film before scanning it. A photograph without use, with low resolution, made for the sake of the archive’s completeness.

The dust on the film appears to be carried landwards, by the same gust of wind lifting the kites.

At the State Archive in Kortrijk, I am leafing through a 1955 photo album of the construction of the provisional church in Lokeren by the famous furniture company Kunstwerkstede De Coene. Gigantic wooden, prefabricated beams structure the building. It is cold. An old man in a grey suit shuffles between the racks to look up the date of birth of his great great grandmother. Snow covers the unfinished provisional roof. A bus passes, I reckon, through the pouring rain.

During the one day course *Safety and Avalanches*, teacher G.T. shows pictures of different manifestations of snow and ice. If one learns to read them, one can deduce the wind direction when hiking or skiing in mountainous terrain.
Wind direction is crucial for assessing the stability of the snow. G.T.'s examples are of Austrian origin. He speaks about 'Anraum': displaced snow can get stacked horizontally against an object, such as a tree or a cross. The snow 'grows and builds into the wind'. Counter-intuitively, the snow points to the side the wind is coming from. One can expect dangerous terrain in the direction of the 'unbuilt' side of the object.

Between the rhinos and the kangaroos in the Antwerp Zoo a wooden footpath curves through a grove of Sequoiadendron Giganteum trees. In the middle of this Californian forest, visitors find the giant slice of a felled tree of the same species. It was brought to the zoo in 1962 and was approximately 650 years old at the time. Eleven labels point out significant moments in history on the tree's growth rings. They range from zoo- and zoology-related moments (for instance: '1901: The Okapi is described as a species', or '1843: Foundation of the RZSA and opening of the Zoo', or '1859: Darwin publishes *The Origin of Species*', etc.), to cultural and historical milestones ('1555: Plantijn starts publishing books in Antwerp', or '1640: Rubens (baroque painter) dies', or '1492: Columbus in America'). Another label points to the last growth ring and reads: '1962: this tree is felled and this tree disc is installed at the Zoo.'

The label pointing to the centre of the tree implies a simultaneity between the tree's first growth year and the Battle of the Golden Spurs in 1302.

Notes

On closer inspection the slice seems to consist of two halves that were put together like a jigsaw puzzle. The resulting gap is skilfully patched with what appears to be wood from the same species – possibly even the same mammoth tree.

A mostly empty book designed to collect cigar bands. The bands are glued to the paper at their left side, so the information on the backside, explaining the image and referring to the series it belongs to and the number of different labels the series contains, can be looked up. The book has complete and incomplete series on Christopher Columbus (complete), tanks (incomplete), the origins of civilization (complete), Ancient cultures (incomplete), fashion (complete), South-American sculptures (complete), Ancient columns (incomplete), Nobel Prize Winners (incomplete), an unclarified series of seven men, most of whom are ‘prof.’ or ‘dr.’(complete / incomplete), design plates (incomplete), famous Belgians (complete / incomplete), statesmen (incomplete) and football players (incomplete). The first page in the book is used to present two series. The left column presents the Egyptian dynasty (incomplete). The middle and right column present a series of bands by the brand Jubilé on the history of energy in telling scenes and pieces of machinery.

Series: Energy

Middle column, top to bottom:

- The writing telegraph. Hughes
- Experiment with a sulphur globe. William Gilbert
- Primitive telephone. Philipp Reis
- Wireless telegraph.[1] Guglielo [sic] Marconi
- The arc of Volta. Sir Humphry Davy
- Fire in the wagon. Thomas Alva Edison
- Experiments with lightning. Benjamin Franklin
- Cathode for creating X-Rays. Wilhelm Röntgen
- Rotating magnetic field. Galileo Ferraris

Right column, top to bottom:

- Electric discharge. William Watt
- Magnetic telephone. Antonio Meucci
- Muscels reacting to electricity. Luigi Galvani
- Voltaic pile. Alessandro Volta
- Oscillating circuit. Guglielo [sic] Marconi
- Development of the telephone. Graham Bell
- Telephone, beginning of the 20th century
- Next to his wireless telegraph. Guglielo [sic] Marconi
- Invention of the incandescent light bulb. Thomas Alva Edison
- Morse’s telegraph. Samuel Morse

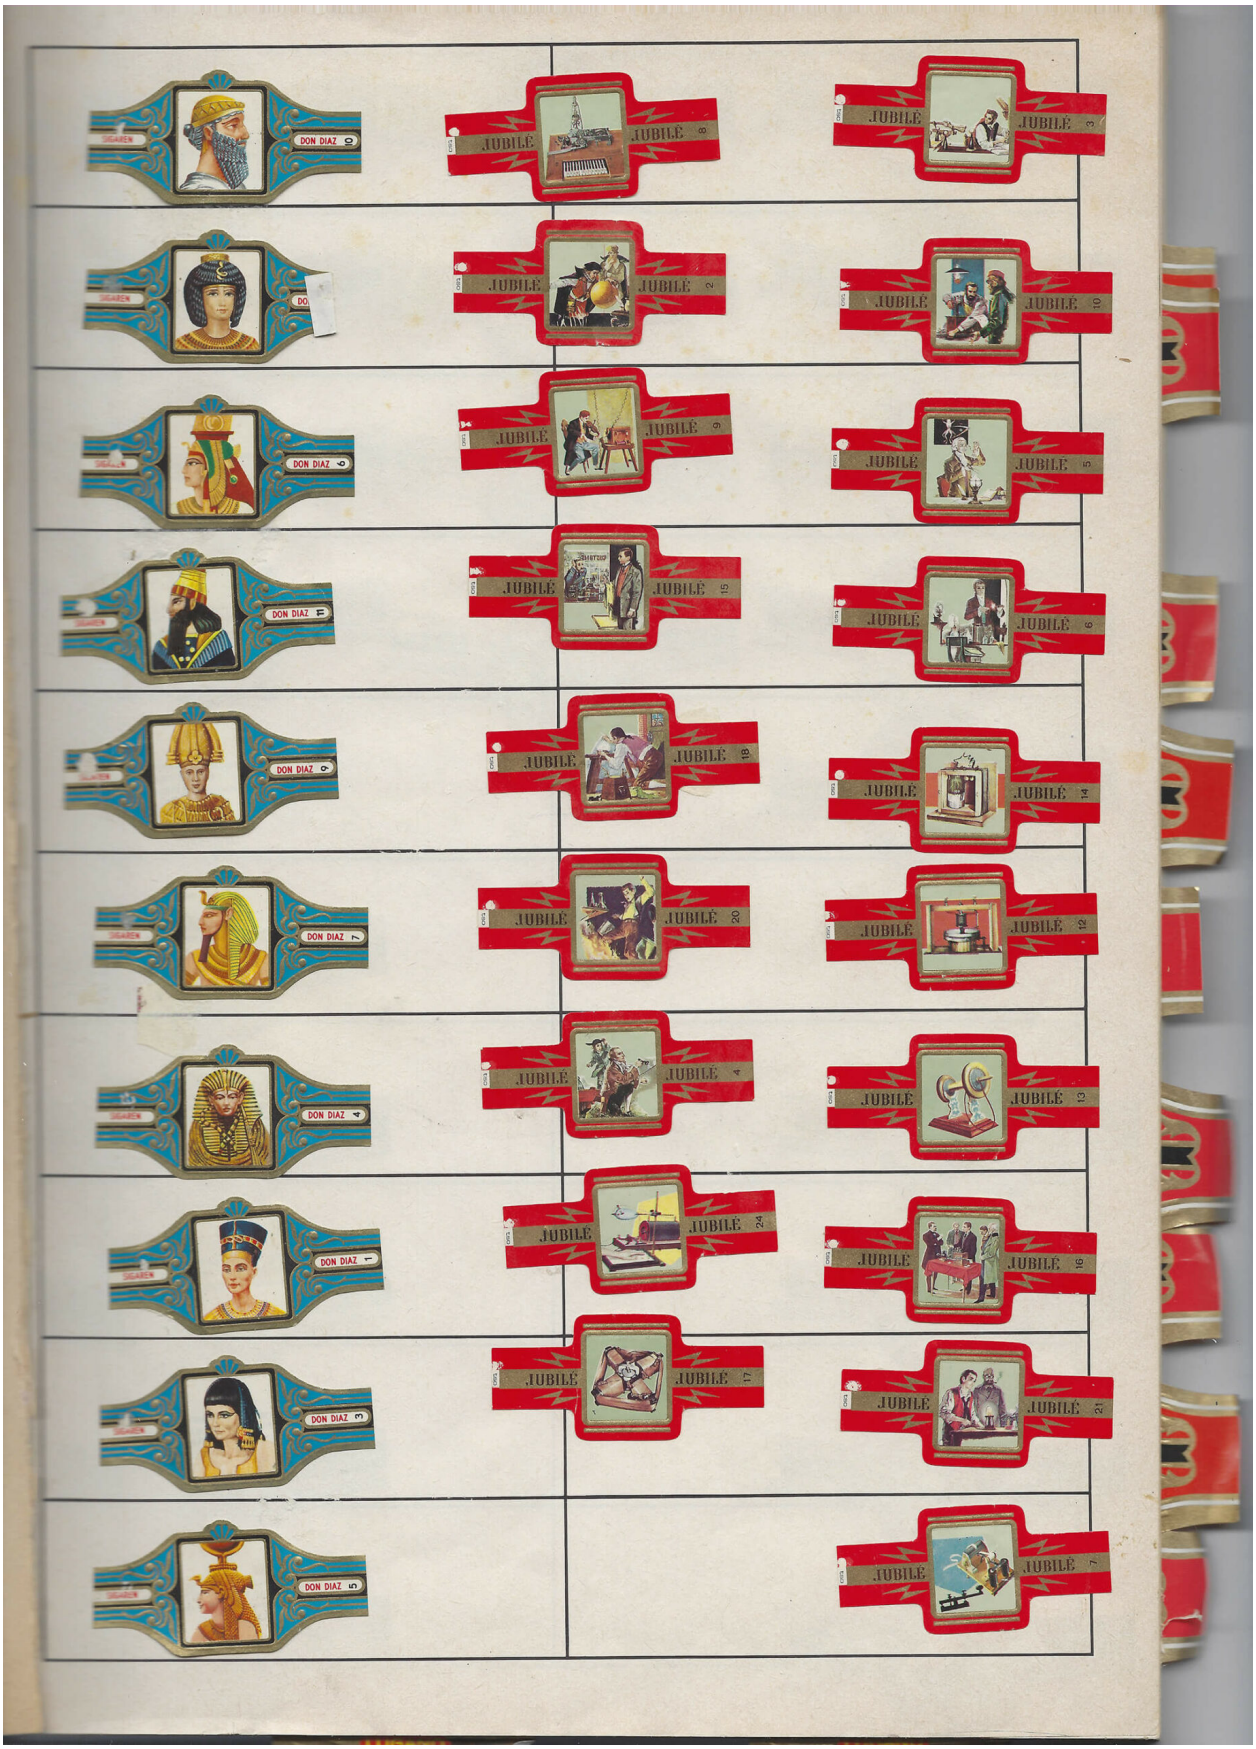

The series is incomplete.[2]

Notes

1 The scene shows a man standing at a desk, sticking out his hand to an officer in a window that reads, in mirror writing: Customs.

2 On eBay a complete series is advertised (15 EUR), with a lo-res picture of the whole collection, including the five bands missing in my grandfather’s collection. The information on the back, however, is not given. It leads to a highly speculative history of energy.

- A man in a gown watching a T-shaped object.
- A child in a cellar, sitting on a stool at a table with gray objects.
- A soldier kneeling beside a child, in front of a train, and in front of a boat.
- A low table with a giant cartwheel of sorts and a box.
- A vertical object with what seems to be a bell on top.

The Bahrain Formula 1 Grand Prix takes place every year since the track's inauguration in 2004 – except for 2011 when the race was cancelled due to protests in the wake of the Arab Spring. To prevent sand from covering the track and entering the air-ducts and engines, the sand near the track is sprayed with an adhesive to keep it from blowing around.

The cloud of sand in the picture (made near Avenue 61 on an artificial island close to Seef) was made by kicking it into the frame while M.R. and M.D.C. had to stop and wait for a truck that was being towed after the driver lost control over the vehicle and flipped it onto its side. Days earlier M.D.C. had tried to make a photograph of the F1-track, but couldn't get close enough to make a decent picture.

Near Avenue 61 on an artificial island close to Seef, a truck is being towed after the driver lost control over the vehicle and flipped it onto its side. A warm wind blows in from the Persian Gulf.

A police officer signals us to come closer. ‘Why are you taking pictures?’ he asks. ‘This is just an accident. You have to delete the pictures from your phone. Now.’ After checking the pictures-folder on our phones, he gets in his car, drives a few metres, stops the car and rolls down his window. ‘And don’t do it again!’ he yells. Then he drives off, raising a cloud of sand in his wake.

Notes

In June, 2014, a severe hailstorm hit Belgium. Warnings were broadcast. A football game between the national teams of Belgium and Tunisia was paused. The morning after, there were small dents in the hood and the roof of the car, each a square centimeter in size, some 10 centimeters separated from each other. The storm didn’t get a name.

Assessing the damage, the insurance company’s expert took the dents into account to establish the wreck’s worth.

11:53:58

A year ago, mid-August, just before sunrise, the mostly unlit office buildings line the road that leads to the underground parking. I turn off the ignition. I'm in F36. The walls are painted pink. Looking for the exit, I take the escalator and get stuck in an empty shopping mall. The music is playing but all the shops are closed off with steel shutters. So are the exits. I'm out of place. In keeping early customers out, the mall is keeping haphazard visitors in. I'm back in the parking lot. The elevator is broken. I take the stairs and walk by a homeless man, sleeping. There's shit on the floor. I open the door that leads out of the stairwell. It slams shut behind me. There's no doorknob. I find myself on a dark floor between mall and parking lot. People are sleeping; some are awake. Heads turn toward me. I start walking slightly uphill towards where I think I might find an exit, or an entrance. The scale of the architecture has shifted from car (F36) and customer (the closed mall) to truck. I find myself amidst the supply-chain. It takes five minutes, maybe fifteen, maybe more to get out and see the office buildings towering over me in the first light of day.

The first light of day
