

org is an online platform, collecting, describing, presenting and generating documents of all sorts. It documents documents.

Your path through the collection lead along Nap, Starry sky, long exposure, Sandersleben (Saxony-Anhalt), 14 April 2023, Interviews with residents of Sandersleben, no specific location, 2023 [2], Tracking, Green or blue, Neptune in opposition [16/20] – Unrest, Neptune in opposition [14/20] – A rolling shed, Neptune in opposition [8/20] – Diamonds, Collaborators (portraits), 2023, Double Reward, 2024, Selling Public Domain, 2021, Temporary Photograph, 2017, Traces of logging on Mount Egaleo, Stopwatch, Neptune in opposition [19/20] – Approximation, Aggressive mimicry, Zebras, F 6, It's Pouring, Gatun Locks, 12:13, Flashlight in a dark corner of the Oval Room

What constitutes a 'document' and how does it function?

According to the *Oxford English Dictionary*, the etymological origin is the Latin 'documentum', meaning 'lesson, proof, instance, specimen'. As a verb, it is 'to prove or support (something) by documentary evidence', and 'to provide with documents'. The online version of the *OED* includes a draft addition, whereby a document (as a noun) is 'a collection of data in digital form that is considered a single item and typically has a unique filename by which it can be stored, retrieved, or transmitted (as a file, a spreadsheet, or a graphic)'. The current use of the noun 'document' is defined as '*something* written, inscribed, etc., which furnishes evidence or information upon any subject, as a manuscript, title-deed, tomb-stone, coin, picture, etc.' (emphasis added).

Both 'something' and that first 'etc.' leave ample room for discussion. A document doubts whether it functions as something unique, or as something reproducible. A passport is a document, but a flyer equally so. Moreover, there is a circular reasoning: to document is 'to provide with documents'. Defining (the functioning of) a document most likely involves ideas of communication, information, evidence, inscriptions, and implies notions of objectivity and neutrality – but the document is neither reducible to one of them, nor is it equal to their sum. It is hard to pinpoint it, as it disperses into and is affected by other fields: it is intrinsically tied to the history of media and to important currents in literature, photography and art; it is linked to epistemic and power structures. However ubiquitous it is, as an often tangible thing in our environment, and as a concept, a document *deranges*.

the-documents.org continuously gathers documents and provides them with a short textual description, explanation, or digression, written by multiple authors. In *Paper Knowledge*, Lisa Gitelman paraphrases ‘documentalist’ Suzanne Briet, stating that ‘an antelope running wild would not be a document, but an antelope taken into a zoo would be one, presumably because it would then be framed – or reframed – as an example, specimen, or instance’. The gathered files are all documents – if they weren’t before publication, they now are. That is what the-documents.org, irreversibly, *does*. It is a zoo turning an antelope into an ‘antelope’.

As you made your way through the collection, the-documents.org tracked the entries you viewed. It documented your path through the website. As such, the time spent on the-documents.org turned into this – a new document.

This document was compiled by _____ on 17.03.2025 12:18, printed on _____ and contains 21 documents on 50 pages. (<https://the-documents.org/log/17-03-2025-6523/>)

the-documents.org is a project created and edited by De Cleene De Cleene; design & development by atelier Haegeman Temmerman.

the-documents.org has been online since 23.05.2021.

Notes

- De Cleene De Cleene is Michiel De Cleene and Arnout De Cleene. Together they form a research group that focusses on novel ways of approaching the everyday, by artistic means and from a cultural and critical perspective.

A constant, dependable presence. With the camera focused on the North Star for an extended period, the rotation of the Earth becomes visible. Nearby, in the municipality of Wiederstedt, the geologist, poet and philosopher Friedrich von Hardenberg (better known by his pen name Novalis) spent his childhood years between 1772 and 1784. A quote of his is engraved on a stone bench in the park surrounding the chateau where he was raised: “The human being does not speak alone – the universe also speaks – everything speaks – infinite languages.”

Freely adapted from interviews with residents of Sandersleben (Saxony-Anhalt). Three-act play. The first two acts take place in the present day; the third is set in the future.

From Act 2 ‘The Inhabitants’, Scene 5, ‘Living Differently’.

Characters: MR DUNST club member I, MR WINDORF amateur astronomer

Interviews with residents of Sandersleben, no specific location, 2023 [2]

HERR DUNST I imagine that if nothing were to happen, the future would be a blank canvas, devoid of anything.

HERR WINDORF Just beyond S, there was a Stone Age settlement. When I gaze at the stars there at night, I'm struck by the thought that what I'm seeing has already been witnessed by someone long ago. From Saturn's perspective, Earth is merely a faint dot, yet here we are living on it – tiny, but incredibly beautiful. It's captivating. It changes the way you walk through the forest, the way you move through S.

I drove through the neighborhood seeking evidence of the disruption using a power outage map as a compass. Winding through quiet streets, I stumbled upon a lone blue PG&E truck idling opposite a charred utility pole with fragments of wood and wire strewn across the pavement. I parked my car and walked toward the truck to ask the driver what had happened. He pointed to the top of the pole where a porcelain insulator dangled precariously from a high-voltage line. “Tracking,” he said curtly. “Is that like a short circuit?” I asked. “Kind of,” he replied before pausing. He finally elaborated, explaining that the problem arises when moisture from morning fog settles on power lines, creating a pathway for electricity to arc across components.

He then input something into a handheld device before driving away, leaving the repair for another service team to complete. I gathered the debris intending to collect the remaining components that comprise a utility pole, each having failed in one form or another. I shipped the fragments to Maziar the following week.

According to @missbluesette, the green K-10 put up for sale by Fred from Zwolle that I came across on marktplaats.nl on 29 September 2022 is not green, but blue. The colour resembles turquoise, I explain, a colour I have always called green. No, turquoise is not green, but blue, she replies. And the texts of my Instagram posts are too long, she says, so she doesn't read them.

In *Six Stories from the End of Representation*, James Elkins writes: ‘Astrophysicists are well practised in “cleaning up” photographic plates by adjusting colour and contrast, removing images of dust, correcting aberrations, restoring lost pixels, and balancing uneven background illumination. When it comes to blur, the usual strategy is to specify what counts as “smooth” and what counts as “pointlike,” and then refine the image until it exhibits the required pointlike properties’¹. Still, some astronomic images keep a certain amount of blur (although it would be technically possible to delineate them). Elkins continues: ‘blur does not need to be a matter of distance from some hypothetical optimal clarity: it can be a functional scale, independent of the viewer’s notions of clarity and even of the image itself’².

On the night of 22 November 2021, I join John Sussenbach in his backyard while he captures Neptune.

He invites me to join him and his wife for dinner. A prayer. Soup and bread. The images he makes, he explains, are complex from a temporal point of view. The light coming from Neptune has travelled for four hours before it reaches us. Moreover, these images are not photographs of a singular moment, but stacked frames of a video-recording. In doing so, he can, to some extent, eliminate the effects of a bad ‘seeing’: the negative effect atmospheric turbulence has on the light that reaches the telescope.

A bright dot is jumping around on his laptop’s screen. ‘That’s Neptune’, he says. With his index finger he follows the dot. ‘That’s the bad seeing. That’s the unrest.’

The next day I send him the photograph I took of him standing on his ladder, dangerously placed on the edge of the tarp covering his pool. ‘Nice to see the open star cluster Pleiades in your photograph’, he replies. He attaches the image he made that night: ‘If there would have been a clear storm on Neptune, it would have shown’.

Summer 2019, between the swingset and the mesh greenhouse, astrophotographer Angelo Van Daele closes the observatory. The wheels roll smoothly across the rails embedded within a concrete slab. His former observatory is now a chicken coop. His neighbour's trees need pruning. The camera mounted on the exterior of the shed allows him to see the instrument from inside the house.

It is said that ‘if a space traveller were unfortunate enough to enter the atmosphere of one of the giant planets [such as Neptune], he or she would not find a single solid surface. Instead, as he or she descended into the planet, our traveller would find that the temperature, pressure, and density would all continue to increase smoothly, with no sharp transitions. Assuming that he or she was adequately protected from the temperature, pressure, and radiation, our traveller would eventually “float” at that level in the atmosphere where the surrounding density and his or her own density were equal.’¹

It is said that it storms on Neptune.
Violently.
1200 mph.

They observed a great dark spot and called it: The Great Dark Spot.

It rains diamonds on Neptune.

When discussing the sensitivities around viewing British propaganda photographs from the 1950s with Mau Mau veterans in Kenya, it became clear that it was not the graphic photographs of atrocities that would trigger the veterans emotionally, but a series of straightforward portraits of men who had pledged allegiance to the British colonial administration. These portraits were catalogued along with the men's names and another photograph of each one of them signing a declaration of collaboration. I was advised by the representative of the veterans' association that it would be too dangerous to share these photographs with the veterans.

In the world of *National Geographic*, white people overlooking a landscape are not uncommon. “The Red Shirt School of Photography” was a label used to describe National Geographic photographers who allegedly brought red clothing and props with them on assignment to put on their subjects in order to make better photographs when working with Kodachrome film, which is famous for its capability of rendering rich colors. Overlooking a landscape wearing red, the observer asserts dominance over the land. They glorify it, seeing a country that is beautiful, rich in resources, and therefore “worth taking”.

The bartender didn't remember the passcode, so he pointed out where I could find it: on the bottom of the router box. Instead of trying to read the tiny numbers on the router label in the dark, while at the same time awkwardly typing it into my small, cumbersome smartphone keyboard, I decided to photograph the label. This allowed me to retreat back to my seat, zoom into the image and easily enter the code into my phone. The photograph immediately lost its value the moment this action was completed.

‘The saw cuts are sloppy and appear to be made in a haste.¹ The cuts are situated at a height of approximately seventy centimetres from the ground. The hill’s protected woods have seen an increase in these scattered traces of illegal logging since a rise in tax on heating fuel in October 2012. Many Greeks set about logging illegally in protected woods, mostly in the colder North of the country, but also here in Egaleo, a western suburb of Athens.’

He's wearing a digital watch. It looks like a Casio. It's impossible to read the time, no matter whether you are studying the high-resolution scan of the negative or the negative itself, with the aid of a loupe and lightbox.

The device had a stopwatch function. When we were around eight and ten, we used to compete in trying to start and stop the stopwatch in the shortest possible interval. The smaller the gap, the closer to zero. Sometimes he would also have a try. We once managed to get it down to 00:00:00:03. Neither of us dared to press 'reset' and try again.

Sundown at the public observatory in Beisbroek. A choir of birds mixes with the continuous hiss of the freeway nearby. The camera captures the receding colours. The blinds are open; the half dome is closed.

A documentary approach: moving along a tension between proximity and distance. If the pendulum swings to either side, it becomes difficult to speak of *the documentary*. Proximity without distance, and distance without proximity, undermine it, precisely because any approach is then out of the question.

The *Cryptolaemus montrouzieri* is commonly known as the mealybug destroyer. This species of ladybird gets its nickname from its capacity to battle mealybugs in plantations and greenhouses.

The website *waarnemingen.be* that gathers observations of plants and animals in Belgium lists multiple observations in the wild of the *Cryptolaemus montrouzieri*. The website explains that ‘in (northern) Europe, the species is widely traded and used in greenhouses and will regularly escape from them. But this ladybird cannot survive our winters (yet?). Sightings within the Benelux must therefore be entered into the register as “escape”. However, the species is already established in the Mediterranean area.’ (our translation)

The larvae have a waxy covering that makes them look like the mealybugs they prey upon, allowing them to avoid being correctly identified by the ones they are about to devour.

In an attempt to get rid of the mealybugs on my plants, I ordered 25 adult ladybirds. They were dead on arrival.

On Mondays, before noon, I go to the supermarket with my two-year-old son. After passing the lasagnes, the loaves of bread and the fruit and vegetables, we make a short stop at the aquarium with the lobsters. Around New Year, there are two of them.

After we've paid for the groceries and have put them in the car, we walk into the pet shop. We look at the parrots (Jacques, Louis and Marie-José), the rabbits, the guinea pigs, the assorted caged birds and the fish and turtles. He's very fond of the *Cyphotilapia Frontosa Burundi*. He calls them zebras. They hail from Lake Tanganyika, the label says. It's the second-oldest freshwater lake, the second-largest by volume and the second-deepest. The pet shop has adorned their aquarium with a scene of ocean waste.

In an effort to avert guilt, I look for something cheap and more or less useful to buy: birdseed, a snack for the neighbour's cat, a comb for his grandparent's Labrador, etc.

In his *Handboek Varende Scheepsmodellen* (Handbook Sailing Ship Models) André Veenstra explains the different classes in ship model-competitions. There's a wide variety. For static ship models the most important one is 'truth-to-nature'. A jury compares the model to photographs of the actual ship and brings into account categories such as amount of work, degree of difficulty, scale ratio, construction execution and painting.

The most interesting class – according to Veenstra – is F 6. In this particular class, a number of participants with different boats will form a team. Together, they will perform a certain 'act' with a maximum duration of ten minutes. During the act, they mimic a slice of reality. Such as, for example, 'rescuing' and towing a ship in distress; extinguishing a fire on a tanker or oil rig, lichen and/or tow the sunken wreckage to the harbor, stage a naval battle, etc.

Page 262 shows a photograph of such a mimicked slice of reality. The caption explains: 'Image 14.15. The Dutch demonstration in the F 6 class during the European Championship of 1975: the oil rig is set on fire by a motorboat with terrorists. The fire is extinguished and the oil rig is quickly towed to a safe harbor by tugs. The show was performed by six people and took a very creditable fourth place.'

In his debut novel 'De Metsiers' Hugo Claus employs a multiple narrative perspective. In the copy I picked up in a thrift store, there's a bookmarker between pages 44 and 45 where the perspective shifts from Ana to Jim Braddok. It's pouring. The pink piece of paper lists 9 sessions at a driving school. There's a total of 20 hours, taught alternately by Johan and Guy.

Notes

In 2000, 2006 and 2017 the twenty-sixth of December was a Tuesday. (Earlier years are improbable, since the Euro was not introduced yet.)

Sources

Claus, H. *De Metsiers*. Amsterdam: Uitgeverij De Bezige Bij, 1978.

On March 23th 2015, a high pressure system above Panama Bay blew strong winds landwards. At the Gatun locks, one of the webcams overlooking the Canal neglected the traffic and briefly captured its own images. The ship's presumed passage through the Gatun locks wasn't recorded by this camera and the AIS-transponder did not save any data of the ship's transit from the Pacific to the Atlantic side of the canal: the Authenticity managed to swap oceans undetected.

On February 16th 2016, the transponder still signals the ship near the port of Bahia Las Minas. The current is calm, the ship has been practically immobile for a year.

During a two hour tour, H.V. (head of the science collection) guided us from the library to the observatory and back. Along the way, he touched upon various rarities: one hundred ninety-five volumes of the Encyclopédie Méthodique (according to H.V. the most complete copy left in the world), the severed summit of Mont Blanc (‘Actually de Saussure brought back a triangular piece of rock from just below the snow line near the summit’), an original copy of the publication on the infamous Lügensteine (‘These date back to the time before the hoax was unveiled’)...

In guiding us from room to room, H.V. piled oddity upon curiosity. He showed a particular interest in all things fish-related.
