

org is an online platform, collecting, describing, presenting and generating documents of all sorts. It documents documents.

Your path through the collection lead along Neptune in opposition [6/20] – Pier, Schelp, Aggressive mimicry, Iguanodon, Owls and cats, The Imaginary Edge of the Roadway, Potholes, What the left hand forgot, Moulds for speculation, Shelter, Thunder Afar, Raisins, A Fever Dream, Sea glass, We Welcome Comments, Room 3, Pipe, Guzmanian, Roofing (1), Directory, A Seismic Change, Phase, Index, Slightly Askew (1), 12M m3 [6/8] 56 years, Launching a Website, Roofing (5) – UDI, Firing tool

What constitutes a 'document' and how does it function?

According to the *Oxford English Dictionary*, the etymological origin is the Latin 'documentum', meaning 'lesson, proof, instance, specimen'. As a verb, it is 'to prove or support (something) by documentary evidence', and 'to provide with documents'. The online version of the *OED* includes a draft addition, whereby a document (as a noun) is 'a collection of data in digital form that is considered a single item and typically has a unique filename by which it can be stored, retrieved, or transmitted (as a file, a spreadsheet, or a graphic)'. The current use of the noun 'document' is defined as '*something* written, inscribed, etc., which furnishes evidence or information upon any subject, as a manuscript, title-deed, tomb-stone, coin, picture, etc.' (emphasis added).

Both 'something' and that first 'etc.' leave ample room for discussion. A document doubts whether it functions as something unique, or as something reproducible. A passport is a document, but a flyer equally so. Moreover, there is a circular reasoning: to document is 'to provide with documents'. Defining (the functioning of) a document most likely involves ideas of communication, information, evidence, inscriptions, and implies notions of objectivity and neutrality – but the document is neither reducible to one of them, nor is it equal to their sum. It is hard to pinpoint it, as it disperses into and is affected by other fields: it is intrinsically tied to the history of media and to important currents in literature, photography and art; it is linked to epistemic and power structures. However ubiquitous it is, as an often tangible thing in our environment, and as a concept, a document *deranges*.

the-documents.org continuously gathers documents and provides them with a short textual description, explanation, or digression, written by multiple authors. In *Paper Knowledge*, Lisa Gitelman paraphrases ‘documentalist’ Suzanne Briet, stating that ‘an antelope running wild would not be a document, but an antelope taken into a zoo would be one, presumably because it would then be framed – or reframed – as an example, specimen, or instance’. The gathered files are all documents – if they weren’t before publication, they now are. That is what the-documents.org, irreversibly, *does*. It is a zoo turning an antelope into an ‘antelope’.

As you made your way through the collection, the-documents.org tracked the entries you viewed. It documented your path through the website. As such, the time spent on the-documents.org turned into this – a new document.

This document was compiled by _____ on 21.09.2022 21:42, printed on _____ and contains 28 documents on 60 pages. (<https://the-documents.org/log/21-09-2022-4595/>)

the-documents.org is a project created and edited by De Cleene De Cleene; design & development by atelier Haegeman Temmerman.

the-documents.org has been online since 23.05.2021.

Notes

- De Cleene De Cleene is Michiel De Cleene and Arnout De Cleene. Together they form a research group that focusses on novel ways of approaching the everyday, by artistic means and from a cultural and critical perspective.
www.decleenedecline.be / info@decleenedecline.be
- This project was made possible with the support of the Flemish Government and KASK & Conservatorium, the school of arts of HOGENT and Howest. It is part of the research project *Documenting Objects*, financed by the HOGENT Arts Research Fund.

As an architectural structure, the pier is fundamental in observational astronomy: it can be found in the backyards of amateur observatories, as well as in professional ones. This column is a quintessential part of the physical interventions that are necessary to distinguish noise from valuable data. The pier disjoins the telescope from the observer, from the observatory and from the surroundings. Tremors of passing cars, the astronomer's footsteps and coughs, the neighbour's soundsystem: they could result in an agitated telescope. A falling mug would cause the instrument to shift lightyears away from its target.

Notes

- In August 2019, I visited Chris De Pauw, an astrophotographer, at home. He showed me his private observatory. As we were both waiting for clouds to obscure the sun and get softer light for the photograph, he told me about the rolling shed, its advantages and the modifications he was planning on. On closing the observatory – by rolling the shed over the instrument – he manoeuvred the instrument into its 'park'-position: an azimuth of 160 degrees and an elevation of 8 degrees above the horizon. The shed's doors and hinges barely cleared the telescope.

Halfway March my dad started finding empty clam shells on the banks of the Zuidlede along the pasture where he used to herd sheep. He had never seen this type of clam before. There were easily seventy of them along a hundred metre stretch of riverbank.

He brought two specimens to someone he knows in the neighbouring provincial domain. She would look into it, she said, and that she would probably pass it on to someone at the educational department.

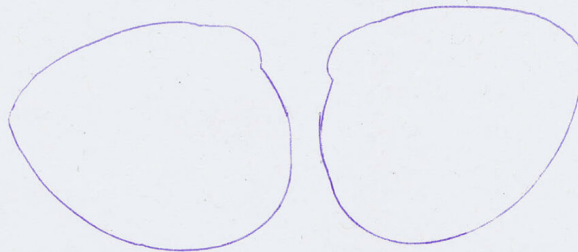

Yesterday he (my dad) received a printout of the Dutch wikipedia-page on the Brakwaterstrandschelp (*Rangia Cuneata*). On the page Paul (who sends his regards at the bottom of the document) traced around the scallops with a blue ballpoint pen.

My dad added in capitals – also with a blue ballpoint pen – that the *Rangia Cuneata* is an invasive species, native to the Gulf of Mexico. The first time it was observed in Europe was in Antwerp in August 2005, most probably they reached Europe in the ballast water tanks of large ships.

WIKIPEDIA

Brakwaterstrandschelp

De **brakwaterstrandschelp** (*Rangia cuneata*) is een tweekleppigensoort uit de familie van de Mactridae.^[1] De wetenschappelijke naam van de soort is voor het eerst geldig gepubliceerd in 1832 door Sowerby I.

Brakwaterstrandschelp

The *Cryptolaemus montrouzieri* is commonly known as the mealybug destroyer. This species of ladybird gets its nickname from its capacity to battle mealybugs in plantations and greenhouses.

The website *waarnemingen.be* that gathers observations of plants and animals in Belgium lists multiple observations in the wild of the *Cryptolaemus montrouzieri*. The website explains that ‘in (northern) Europe, the species is widely traded and used in greenhouses and will regularly escape from them. But this ladybird cannot survive our winters (yet?). Sightings within the Benelux must therefore be entered into the register as “escape”. However, the species is already established in the Mediterranean area.’ (our translation)

The larvae have a waxy covering that makes them look like the mealybugs they prey upon, allowing them to avoid being correctly identified by the ones they are about to devour.

In an attempt to get rid of the mealybugs on my plants, I ordered 25 adult ladybirds. They were dead on arrival.

I recognized it in a flash, the late Jurassic-early Cretaceous herbivore looming dangerously over the road I was cycling on. I thought of *Some Windy Trees*.¹

A utility pole (425638, 07/99, 07/2002, COBRA), electrical wires, a hawthorn (*Crataegus*) and an old man's beard (*Clematis vitalba*). A symbiosis.

For about an hour, he has been saying ‘owl’ at regular intervals. A cartoon character he picked up somewhere and is now fantasizing about, I guess. Or a Disney reference in one of the songs that have been playing on repeat all day, in the car, driving home from holidays.

50 kilometers further, I recognize the birds in the high-voltage pylons along the highway.

According to the amateur experts at hoogspanningsforum.com, these French pylons – used for conducting electricity from 63kV to 400kV – are nicknamed ‘chats’: the wiring can be interpreted as feline whiskers.

Some genera of owls, such as the *Megascops* or Screech owls, have whiskers.

Article 75 of the Royal Decree containing general regulations for road traffic and the use of public roads, published in *Het Belgisch Staatsblad* on 9 December 1975, lists the rules for longitudinal markings indicating the edge of the roadway.

According to 75.1, there are two types of markings that indicate the actual edge of the roadway: a white, continuous stripe and a yellow interrupted line. The former is mainly used to make the edge of the roadway more visible; the latter indicates that parking along it is prohibited.

In 75.2, the decree focuses on markings that indicate the imaginary edge of the roadway. Only a broad, white, continuous stripe is permitted for this purpose. The part of the public road on the other side of this line is reserved for standing still and parking, except on motorways and expressways.

At the end of the day, riding home after work, I find
a text on my hand:

C
D[...]ers
Desk
K
Communication book

‘Diapers’, I recall, and stop at the shop to buy them.
Sweat, dust, and manic hand rubbing have rendered
parts of the writing illegible. ‘C’ is for Carl, whose
newborn I need to visit as soon as possible.
Sometimes, I can’t remember what the initial stands
for. I don’t have any friends with names beginning
with a K (who have newborns I need to visit).

The right hand writes, the left hand serves as the
canvas. The back of the right hand, folded around
the pen, is blank and tells the always already written
on back of the left hand, whose palm never holds a
pen, what to register. Right: an author. Left: a
poem, sunken into the pores.

Back home, I trace ‘Desk’ again, as not to forget to
clean it tomorrow.

In Veurne, at the bakery museum, old *speculaas* moulds are presented in an almost religious fashion. Looking at these wooden blocks, they appear to be the negatives to Romanesque sculptures.

How does it feel to be conserved and showcased when your nature is to be a tool? What would it mean to re-use them, to fill those empty molds, to shape something new without altering the matrix, to project what it would be like, to try out recipes and different baking, to learn from it and enjoy the results together? What scenes are even depicted? We lost part of their meaning, we could dig further, browse the books, ask our grandparents and collectively invent whatever narrative they might hold.

Notes

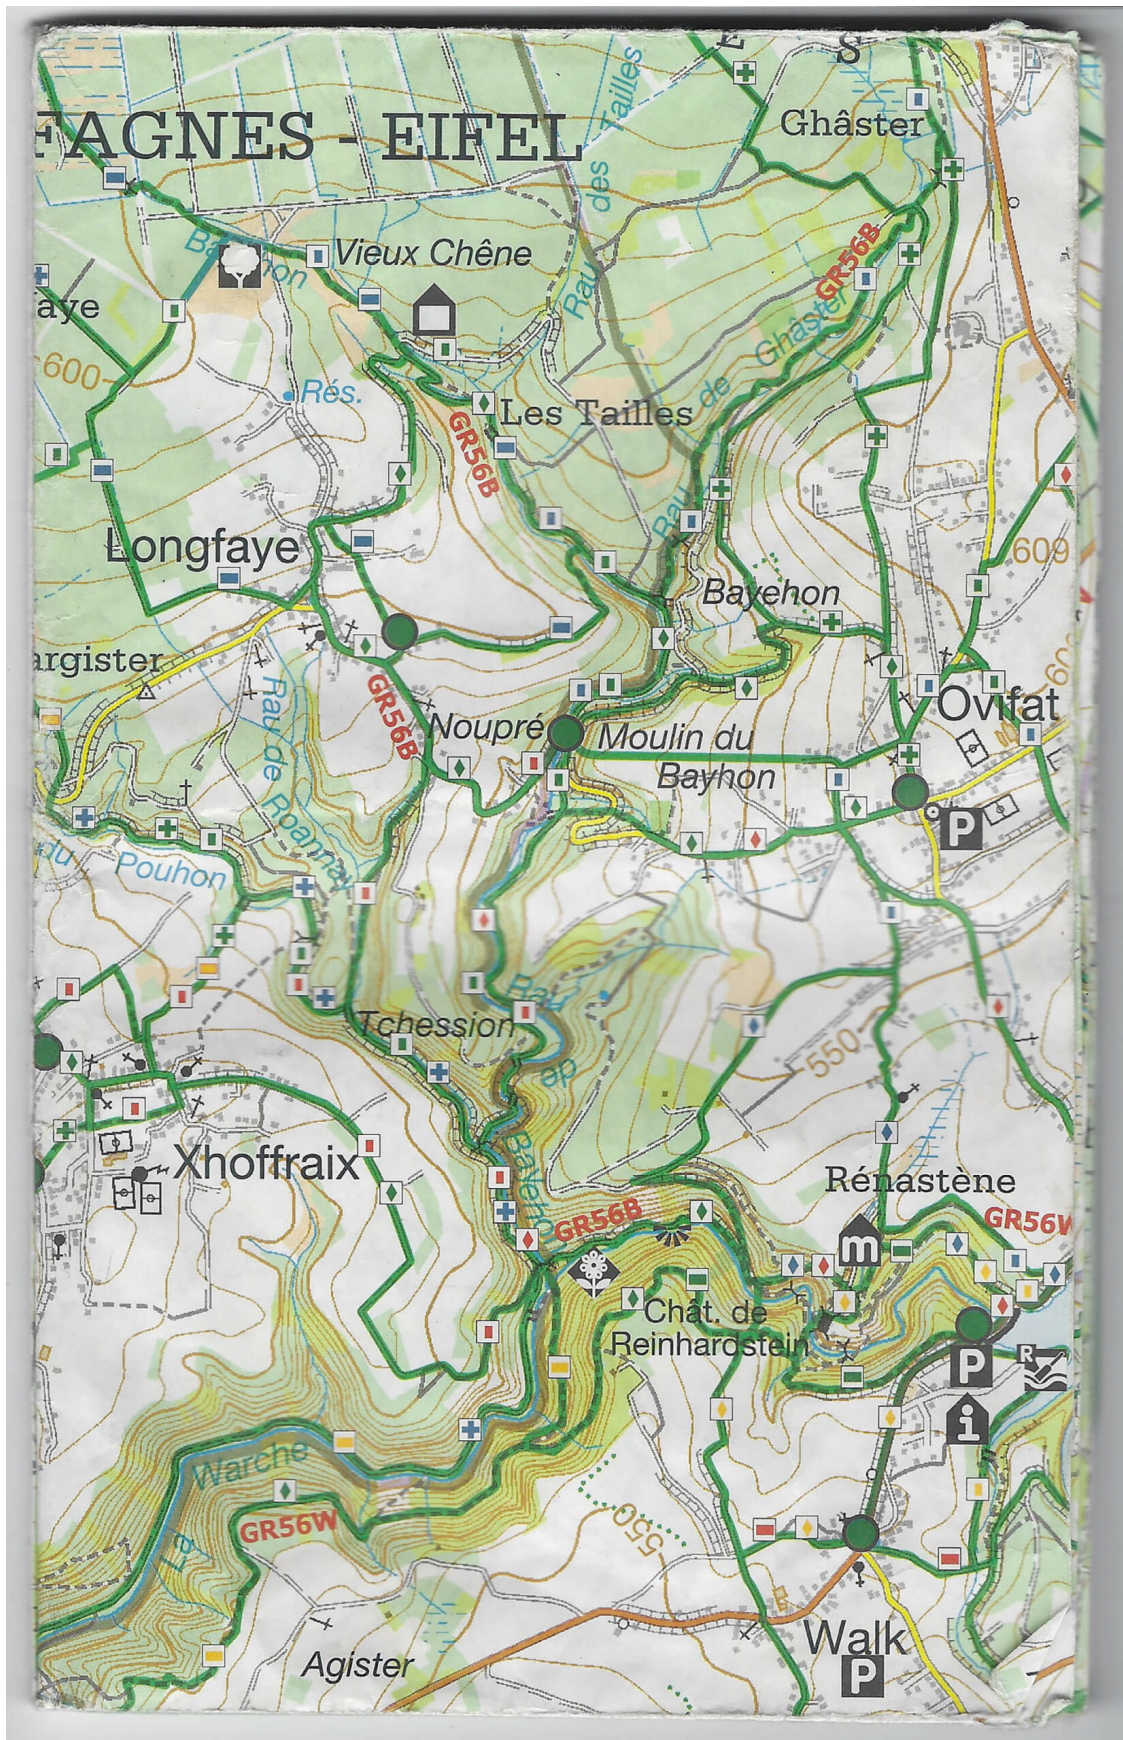

- Clementine Vaultier's interests, although trained as a ceramist, are in the warm surroundings of the fire rather than the production it engenders.

The paths in the valley of the Bayehon are covered with ice. We are making our way down towards the valley of the Ghâster. The temperature is minus 15 degrees Celsius. The water in our drinking bottles is frozen. We are betting on the shelter indicated on the map (*Au Pied des Fagnes, Carte De Promenades*, 1:25.000, Institut Geographique National) to pitch our tent. There is almost no wind, but every breath of air feels like we're being hit with a thousand needles. What the map indicates as a shelter appears to be a picnic table.

It's 21:49 on Tuesday May 4th 2021. I'm sifting through the folders of a back-up drive. When I reach Archief2A/2017/wigny donder, the subfolder contains 103 items (97 DNG-files, 1 JPEG-file and 5 PSD-files). The photographs are all very similar. They show the silhouette of the same tree and hills, the red light of the telecommunications mast on the left and the orange glow of the street's sodium lights. The thunderstorm moves from right to left. _44A3920 is the only exposure (10 seconds) that recorded lightning bolts.

I looked up *heat lightning*, also known as *silent lightning*, *summer lightning*, or *dry lightning*, which is simply cloud-to-ground lightning that occurs very far away, with thunder that dissipates before it reaches the observer. On YouTube I watched: *Top 10 Dangerous Lightning Strikes Thunder recorded on Camera (HIGH VOLTAGE!!)* followed by *Lightning Strikes at the 2019 U.S. Women's Open*. It's 22:07, I am doubtful at first but become convinced I can hear thunder afar.

When I grew up, my parents told me that the number of raisins in the local baker's raisin bread attested to the result of the most recent soccer match of KAA Gent. A victory was celebrated by throwing more raisins into the dough than usual, a loaf following a painful loss was hardly a raisin bread at all.

The baker retired long ago. Today my two-year-old son picked out all the raisins from his slice of bread. KAA Gent's last game was a tie against Union.

During the night, both of us get unwell. One of us is shaking, intensely and relentlessly. The windows are open. For minutes that seem to be hours, it feels like it's freezing. We get extra blankets. Then, it gets too hot.

One of us dreams about *cocodrillos*. It starts out with a single animal, like the one we saw in the National Archaeological Museum, escaping from an aquarium, and ends with lots of little ones crawling all over the place. It's impossible to know how many have escaped.

The other dreams about seismologist Luigi Palmieri's unfortunate assistant and his family's quest to redeem his good name. To deprive him of the burden and guilt set upon him by Luigi Palmieri's report of the 1872 eruption of Vesuvius, the assistant's offspring were building a monument just below the observatory in which their great-grandfather fell asleep. The monument was permanently, and continuously, unfinished.

We both dream of hearing fireworks in Naples.

In the morning, we're slightly alarmed that we both got sick and feverish at the same instant. It's the middle of January, and the weather has been summerlike all week. A gentle morning breeze flies in from the Neapolitan bay while we wait for the bus to take us to the airport.

At the beach of Cap d'Antifer in Normandy one can find 'sea glass' between the pebbles: pieces of broken glass that have naturally weathered by being tumbled by the ocean, over and over. Sharp edges and smooth surfaces vanish. The historical origin of the glass pebbles (glass bottles, a shipwreck) erodes. Only the colour of the pebbles gives an indication of their history, be it vaguely. Varieties of green sea glass are common, but other colours, such as red (Shlitz beer bottles) or yellow (interbellum Vaseline containers), are more rare and have to be sought after attentively.

It's 4.15 PM. The tide is pushing three people towards the cliffs.

Robert Nemiroff and Jerry Bonnell's lesser known project (R.N. and J.B. being the creators of Astronomy Picture of The Day), was making websites containing over a million of digits of square roots of irrational numbers, e.g. seven. 'They were computed during spare time on a VAX alpha class machine over the course of a weekend. [...] We believe these are the most digits ever computed for the square root of seven on or before 1 April 1994.' Elsewhere, R.N. states: 'They are not copyrighted and we do not think it is legally justifiable to copyright such a basic thing as the digits of a commonly used irrational number.' If one wanted to get a copy of the 10 million digits of the square root of the number e R.N. and J.B. computed in their spare time, one can send an email to R.N. at nemiroff@gssc.gsfc.nasa.gov.

- https://apod.nasa.gov/htmltest/rjn_dig.html
- <https://apod.nasa.gov/htmltest/rjn.html>

What follows are the first 1 million digits of the square root of 7. Actually, slightly more than 1 million digits are given here. These digits were computed by Robert Nemiroff (George Mason University and NASA Goddard Space Flight Center) and checked by Jerry Bonnell (University Space Research Association and NASA Goddard Space Flight Center). They were computed during spare time on a VAX alpha class machine over the course of a weekend. We do NOT guarantee the accuracy of these digits. Although these digits have been checked once we encourage others to check them as well. We believe these are the most digits ever computed for the square root of seven on or before 1 April 1994. If anyone is aware of more digits we ask them to please alert us of their existence. We have computed at least 10 million digits of the square root of two as well as several digits of the number e and the square roots of other numbers. These are available on this mosaic server (URL: <http://antwpr.gsfc.nasa.gov/htmltest/rjn.html>). We welcome comments.

- Robert Nemiroff and Jerry Bonnell

A square photograph with an Arabic and French text underneath it is mounted on a foam board, in turn mounted on a sheet of plexiglass. The picture in the middle is flanked by a photograph of and a text about the tumuli of Umm Jidr (left) and the excavations at Abou Saybi (right). They are mounted on the West wall of Guest Room 3 at the Qual'at Al-Bahrain Site Museum, Seef, Bahrain.

Necropolises make up the main archaeological testimonies of the Tylos period (4th century BC – 3rd century AD). The urn in the photograph contains the remains of several babies. They most likely fell victim to an epidemic. The size of the ruler next to the urn remains unspecified.

Notes

The photograph of Room 3 was made while in mandatory self-isolation after flying to Bahrain from Frankfurt and waiting for the result of a Covid-19 test.

The 48-inch Oschin Schmidt, a renowned reflecting telescope at Palomar Observatory, California, was used for the Palomar Observatory Sky Survey (POSS), published in 1958, one of the largest photographic surveys of the night sky.

Based on the man's pipe shadow's direction, thrown onto the telescope, there is reason to believe an off-camera flash was used to make the picture.

Anastasio Guzmán was a Spanish pharmacist and naturalist. He spent most of his career in South-America. He died in 1807 during an expedition in the Cordillera de Los Llanganates in Ecuador, in search of the lost treasure of the Incas. Some time after his death, his colleague Juan José Tafalla suggested naming a certain genus of plants after his friend.

Guzmanias are mainly stemless, evergreen, epiphytic perennials native to Florida, the West Indies, southern Mexico, Central America, and northern and western South America. They are found at altitudes of up to 3.500m in the Andean rainforests.

The symbols beneath the photographs indicate that these Guzmanias require full light, but it is advised to avoid bright sunlight in spring and summer (HALF WHITE, HALF BLACK SUN), the compost should be kept moderately moist during growth, allowing it to dry slightly between each watering period (HALF FILLED WATERING CAN). Unlike, for instance, the Grevillea Robusta, a Guzmania does not require being sprayed regularly (SPRAYER). The four digit code is the AUCTION CODE: 'Every product has a code. This code is indispensable for the trade.' The COLOURED BAR at the bottom shows the availability of a plant quarterly. RED means good, PINK means moderate and WHITE means not available.

The introduction to this booklet mentions that '[p]rinted colours are often not as accurate as the colours of the plants themselves, which is why it is possible that colours shown in pictures in this booklet may be a little different from the colours of the real pot plant.'

Seven very similar and rudimentary buildings take in a trapezoid plot of land in Gilly. They are located between the school on the Rue Circulaire and the houses along the Rue de l'Abbaye. The structures are built of orange brick, concrete structural elements, whitish steel gates and roofing. Every garage has its own number, hand-painted in white on the concrete lintel above each gate. In summer the roofing gets hot and soft.

In 2020, the print versions of the Flemish telephone books 'Gouden Gids' and 'Witte Gids' (The Golden Guide and The White Guide), were published for the last time. From that year onwards, the directory could only be accessed and consulted online. The effect of the production of print telephone directories on the environment is considered to be enormous. As yearly updated, ubiquitous books, they were publications that soon turned superfluous. They led to piles of waste.

From the beginning of the 21st century on, both the print version and the online version had been available. This was a period of medium transition. During the last two decades, the print directory increasingly referred to the websites of the companies listed. To search for e.g. someone to inspect the heating installation, it was possible to find such a company's website via the print directory, and consult the inspector's services and price online, bypassing search engines such as Google and its complex algorithms. The telephone directory had a thematic and alphabetical order, combined with the possibility to buy additional advertising space.

The road down from the top of Mount Vesuvius, at Atrio Del Cavaillo. The sun sets. The last tourist bus has headed down. Then the headlights of the guardian's car swing their way down. It must be freezing. I am holding an orange-sized piece of petrified lava, probably stemming from the 1872 or 1944 eruption. A kilometer further down the road, the old Observatory is empty. Nowadays, monitoring seismic changes is done in a research centre in the city of Naples. Their seismographic registrations can be followed online, in real time. Two headlights swirling along the slopes, underneath me, are coming upwards.

At the Tunis Institut National du Patrimoine, the sand-covered floor has traced Anne Teresa De Keersmaecker's movements to Steve Reich's *Violin Phase*. The venue empties out. It is dark and the way back to the hotel through the medina is labyrinthian and eerie. It has been a couple days since we arrived, and I have managed to make a mental image of the inner city by memorizing some waymarks – intersections, buildings, shops – coupled to a direction. Sometimes, a newly entered street would give out to such a waymark – a peculiar sensation: a flash of spatial insight, like a crumpled ball of paper unfolding. The narrow streets turn and turn. Some passages are closed at night. I must improvise a route, but the basic mental structure to do so is missing. Shopkeepers have moved their goods inside.

I have no sense of orientation. I can't estimate distances nor can I tell north from south. Everything is scaleless. My highly simplified scheme of the city's layout gets us to our destination. The functional interpretation of Tunis differs completely from the actual Tunis. It is a different city we crossed, and made while crossing.

In John Berger and Jean Mohr's groundbreaking book *Another Way of Telling*, the index at the end gives information on the images printed throughout the book. Most of them are Jean Mohr's. In the section 'If each time...' – a wordless sequence of images which aims to develop an alternative way of telling a story – some images are referenced as 'documents'. The information is sparse. On page 138, the index states, there is a 'Document, detail'. It features a closeup of a knitted piece of fabric. It appears to be the same picture as seen on the first page of the section (p. 135), where it is printed beneath another image – a photo by Mohr of hands knitting. On this occasion, the image is indexed as 'Document'.

Until recently, for as long as I could remember, the packaging of Tabasco® Pepper Sauce had been unchanged. On the front of the packaging, there is a photograph of a bottle of Tabasco®, scale 1:1, against an orange background. As far as packaged goods go, this is a highly idiosyncratic and quirky example.

The background colour approximates the colour of the liquid inside the bottle, resulting in as good as no contrast. Moreover, as the image of the bottle is scale 1:1, the packaging becomes kind of unnecessary and superfluous, also because the life-sized image of the bottle is the only way information is given to the customer: there are no additional slogans, no repetition of the brand name, no props and no decor. The image of the bottle advertises the bottle. It seems to add nothing the bottle could not do by its own (like a bottle of wine does).

What makes the packaging truly stand out, however, is the fact that the image of the bottle is not positioned vertically, but is slightly askew. It seems to be the result of a design error, and has an amateur feel to it. The decision to keep it as such and not correct it up until today, is, however, a stroke of genius. The non-vertical positioning alters the relation of the image of the bottle to the bottle inside: as the box is standing on a shelf, the tilted image of the bottle undermines its representational superfluosity.

Where once there was twelve million cubic metres of water, excavators and trucks are moving dirt and rocks that have been hidden from sight for 56 years; piling them up into a temporary dam: a *batardeau*.

As the hours passed, and while clouds continuously kept us from seeing stars and planets, we started to photograph the set-up used to launch this website. To highlight the umbrella that protected the gear from the unpredictable bursts of rain, we used a flashlight: during the thirty second long exposure, it was lit for two seconds. This proved to be enough to give the whole the feel of an untampered, realistic view. Meanwhile, the website was in all likelihood streaming a grey haze, as the telescope was pointed to the fleeting clouds and gradually spinning along with the earth's movement to keep track of the same invisible celestial bodies. As we returned to the base, planet Jupiter had become visible to the naked eye.

In another exposure of the same length, we left the flashlight on for approximately eight seconds and pointed the beam a bit lower.

The torn off section of roofing on the grass has part of a text carved in it: 'UDI' and 'EN' are still legible. It must have come from another roof; the one shown in the photograph has no missing sections, nor visible repairs.

The roofing that is still on the garage shows a drawing of some kind. A floorplan for a squarish building with a supporting column along each side, or the layout for a tactical explanation, perhaps.

Jolimont, December 2021. The place is in ruins. We occupy the domain with students of La Cambre in an attempt to practice ceramics with what is there. In the former ceramic atelier, we gather everything that was purposelessly there: a weird collection of things from the past, waiting to be organized, displayed, used or thrown away.

The firing tool was made to take out the accumulating ashes from the firebox, to keep the air flowing in the oven, raising the temperature, reaching our ceramic-making goal of 1150°C. Not very efficient, time or heat resistant, this savage, yet poetic composition barely survived the firing.

The wooden handle was borrowed from a broom. The scraper is a fragment of a chandelier previously hanging in one of the salons.

The connecting element is an old electrical resistor we found in one of the dismantled ovens.

Notes

- Clementine Vaultier's interests, although trained as a ceramist, are in the warm surroundings of the fire rather than the production it engenders.
